Cardiology Consultants of Atlanta

Prescription Refill Policy

In order to prevent confusion and medical errors, we prefer to address all prescription refill requests directly through our office prescription refill line. We do not interact with commercial pharmacies via telephone or automated faxes for refill requests.

- In order to prevent confusion and medical errors, we prefer to address all prescription refill requests at the time of your office visit. We also have telephone prescription refill request options by dialing the office number 404-298-2220 and pressing option 4.
- In order to prevent confusion and medical errors, please verify your prescriptions with regards to dosages and refills prior to leaving the pharmacy.
- In order to prevent confusion and medical errors, we ask that you bring your medications or a list of your medications to **each** office visit. (if you have not committed them to memory) For your convenience, we have provided prescription cards for you to list your medications and place them in your purse or wallet.
- Please do not call the emergency physician after hour line for routine prescription refills as requests will not be honored.

For the rare instance that a prescription is lost or there is a change in appointment scheduling, we have a prescription refill request line to better serve you. Please allow 48 hours for all prescription refill requests to be completed. If you have questions, concerns or your prescription needs aren't being met please discuss this with our office administrator.

These policies have been implemented for the sole purposed of providing quality care while reducing the possibilities of medical error and business disruption.

Thank you for your patience in this matter and choosing Cardiology Consultants of Atlanta for your cardiovascular needs.
